

Secure WiFi connection setup for Linux Ubuntu 14.04

To connect to the secure WiFi connection for Linux Ubuntu 14.04 (eed-secure or ef-secure services) follow the bellow instructions:

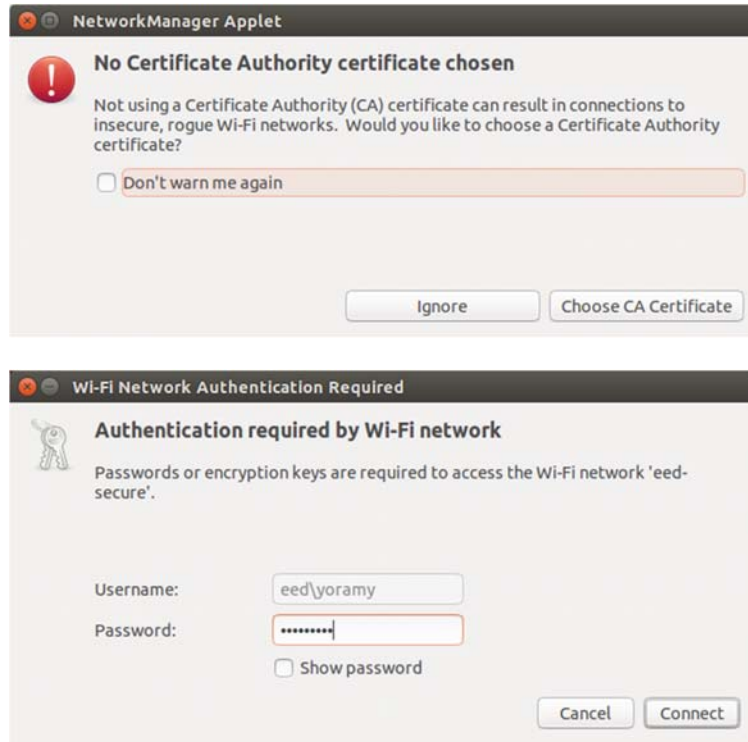

- 1) Turn on the Wi-Fi using the pull down menu or the Network Preferences.
- 2) Click the Network icon to show all Wi-Fi networks.
- 3) Choose eed-secure (or ef-secure) service name.

- 4) When prompt for Athentication, user name and password –
User: use your username in the domain
Password: use your password in the domain

- 5) When prompt for certificate approval, verify and accept the webee.technion.ac.il, or ignore if no CA is found:

- 6) Update the trust Setting for the network details using your local admin username and password.
- 7) The secure connection is shown in Wi-Fi panel.
